

## Introduction

- Coca-Cola is the number one soft drink manufacturer in the world.
- It operates in over 200 countries, and has its headquarters in Atlanta, Georgia.
- They sell 400 different products.
- 70% of its sales are generated outside of North America.

## FEATURES OF A TNC

**Describe a named transnational corporation (TNC) you have studied and its global links. Name of transnational corporation (TNC) .....**

### **Content Guide**

- Inputs, eg. Sources of raw materials
- Processes
- Outputs, eg. Products produced/services offered
- Where production occurs - manufacturing & assembly locations
- Home country/base
- Markets
- Transport networks: for raw materials/products

**Place specific reference:** Locational details, named areas/countries, statistics

## Inputs

- Raw materials: agricultural products (sugarcane, fruit, coffee, soybean) and water.
- Focuses on local sourcing. Important ingredients like water and sugar are sourced locally: Partners can choose the type of sugar used; Europe - beet sugar, Asia - cane sugar, America - sugar from corn syrup.
- Indian fruits are used in the beverages under the juice & aerated drinks categories.

## Processes

- First step is production of the concentrate.
- Concentrate is then mixed with water, sugar and carbon dioxide by bottling plants
- Bottling plants then package, market and distribute the finished beverages to grocery stores, restaurants, cinemas, etc.

## **Outputs**

- Sells over 400 different products, including beverage concentrates and finished beverages (sparkling soft drinks, sports drinks, juice, plant-based drinks, tea, coffee)

## **Home country (base) & Locations of production**

- Coca-Cola headquarters is a campus in Midtown Atlanta, Georgia, USA
- Concentrate is manufactured in Atlanta and then sold to bottling partners - Currently around 225 bottling partners worldwide.

## **Transport networks**

- Coca-Cola has partnered with a real-time visibility provider that uses GPS tracking of delivery trucks. This improves coordination, ensures driver safety, cuts down unnecessary transportation expenses, etc.
- Route optimisation technology enables scheduling deliveries, giving the best route while considering weather, traffic, sunrise/sunset times, weight/load/height capacity.

## **Markets**

- Sold in over 200 countries.
- 10,000 Coca-Cola soft drinks are consumed globally per second.
- 70% of its sales are generated outside of North America.

## **WHY TNCs OPERATE IN MANY COUNTRIES**

| <b>For a named TNC, explain why it operates in many countries</b>                                                                                                                                                                                                                                                           |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Content guide</b> <ul style="list-style-type: none"><li>- <u>Raw material availability</u></li><li>- <u>Markets/profit</u></li><li>- <u>Labour availability</u></li><li>- <u>Level of skills/education</u></li><li>- <u>Cost of labour</u></li><li>- Government incentives</li><li>- Efficient/cheap transport</li></ul> |
| <b>Place specific reference:</b> named places, specific details of TNC, statistical detail                                                                                                                                                                                                                                  |

Before a bottling plant is set up, thorough research & assessment of the area is done. This involves checking availability of resources (land, water, labour) + market.

### **Raw material availability**

- Coca-Cola sources locally to optimise & lower the risks in the supply chain.
- Therefore its manufacturing plants are located in countries where there is availability of raw materials like sugarcane, fruit, coffee, soybean.
- Local sourcing gives partners the freedom to choose the kind of sugar used/ to include local fruits. (give eg. of India, Europe, Asia, America)

### **Market/profit**

- The market for Coca-Cola in North America has a value of \$228 billion and approximately 320 million consumers.
- Countries outside of North America have more consumers: Latin America = 520 million, Europe, Middle East & Africa = 2 billion, Asia Pacific = 3.3 billion.
- By operating in many counties, Coca-Cola has consistently been one of the most profitable food and drinks companies in the world.

### **Labour availability / skill / cost of labour**

- Operates in developing countries like China & India that have more skilled and cheaper labour as compared to European countries or the USA.
- Coca-Cola employs over 700,000 people globally (as of 2021).

### **Government incentives**

- Some governments offer incentives to Coca-Cola to encourage investment.
- For example, in India, the Government of Andhra Pradesh (AP food processing policy 2015-2020) has provided subsidies for setting up research and development centres.

### **Efficient/cheap transport**

- Essential for Coca-Cola's global supply chain.
- Coca-Cola strategically positions manufacturing and distribution centres to minimise transport costs.

## IMPACTS OF TNCs

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| For a country you have studied, describe the advantages & disadvantages of a TNC locating there. Name of country ..... Name of TNC .....                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| For a named example you have studied, describe the impacts of a TNC on and LEDC.<br>Name of TNC..... Name of LEDC.....                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| For a named example of a transnational corporation you have studied, describe its impacts at a <u>local</u> and <u>national</u> scale. **TNC:** Coca-Cola

**Country:** India

### Advantages / Impacts at a national scale (India)

- Coca-Cola invested \$5 billion in India from 2012 to 2020.
- Of the 200 countries where Coca-Cola is sold, India has the fastest-growing market.
- Innovations like the “Maaza Aam Panna”& “Fanta Apple” to expand their footprint in the fast growing fruit flavoured sparkling sub-category.

### **Provides employment & income**

- Coca-Cola system in India directly employs over 25,000 people (including those on contract) & indirectly employs more than 1,50,000 people in related industries.
- Indian fruits are used in beverages under the juice & aerated drinks categories: This benefits 2-lakh farmers.
- Coca-Cola's Indian bottling partner, HCCB, announced 7-8% increment in salaries during the Covid-19 pandemic.

### **Economic/infrastructural development**

- Wide distribution network used for disaster relief.
- Anandana (non-profitable charitable subsidiary of Coca-Cola India): provides monetary grants & other assistance to civil society organisations that implement projects for social welfare (improve access to education, health, water, nutrition)
- Infrastructure like transport & communication networks have improved

### **Multiplier effect**

- Coca-Cola has an output multiplier effect of 2.1: If output of beverage is increased by 1 unit, the direct & indirect effect on economy will be twice of that.
- Increases demand for glass, plastic, refrigeration, transportation, etc, and merchandising/ marketing.
- Coca-Cola shares its best practices and technological advancements to allied industries, leading to improvement in overall quality standards across industries.
- Sports initiatives like Coca-Cola Under-15 football cup.

### **Disadvantages / Impacts at a local scale (Plachimada, Kerala)**

- Bottling plant in Plachimada district opened in 2000.
- In March 2004, local officials shut down the \$16 million bottling plant.

### **Exploitation of resources**

- Plant produced 561,000 litres of beverage per day.
- 3.8 litres of water for each litre of beverage was extracted.
- This led to depletion of water sources & locals had to queue up near taps for water.

### **Pollution - water pollution**

- The factory generated 1.5 to 3 lakh litres of wastewater per day + solid waste.

- Groundwater became brackish & unfit for drinking/cooking.
- **Health impacts:** water-borne diseases; skin & eye irritation, diarrhoea, stomach and abdominal problems, hair loss, etc.
- Fodder, milk, meat and egg samples collected from the area contained copper, cadmium, lead and chromium at levels considered toxic by WHO standards.

**Exploitation of workforce:** undermines workers' rights

## WHY GLOBALISATION HAS OCCURRED

|                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## GLOBAL EXAMPLES

### Advancements in technology, internet, social media

- Google, Amazon, and social media like Facebook, Instagram and Twitter have enabled global exchange of information, ideas & cultures.
- Number of internet users worldwide: 2 billion to 5 billion from 2012-2022.

### Transnational Corporations (TNCs)

- TNCs like Apple Inc. and Samsung Electronics are global key players with widespread supply chains and market presence in multiple countries.
- As of 2022, Apple Inc. had a market capitalization exceeding \$2 trillion.

- The economic size of some TNCs have grown faster than those of countries, accounting for 4.3% of world GDP in 2000. For example, the economic size of Exxon is comparable to the economies of Chile & Pakistan.

### **Transport - Air transport developments, Containers & sea transport**

- Larger, more efficient aircraft have reduced travel times and enabled swift movement of goods and people.
- The total number of airline flights increased steadily since the 2000s, up to 38.9 million in 2019.
- Companies like Maersk have facilitated globalisation through containerisation and other advancements.

### **Variation in Wage Rates Globally**

- MNCs benefit from wage rate disparities, setting up in countries with cheaper labour.
- For example, Nike Inc. has manufacturing operations in Vietnam, where average monthly wage in the manufacturing sector = \$196, compared to average monthly wage in the United States = \$4,290 (in 2021).

### **Westernisation**

- Influence of Western culture, especially consumerism has encouraged globalisation.
- Coca-Cola and McDonald's have become symbols of this Western culture, with operations in over 200 countries.

**Trade Agreements and Free Trade:** Agreements like North American Free Trade Agreement (NAFTA) and Trans-Pacific Partnership (TPP) have removed trade barriers, enabling seamless flow of goods and services.

**Global Banking:** Institutions like Citigroup and Barclays have enabled global banking, providing a range of financial services to clients across different regions.
